

ABSTRACT

The present invention relates to new pharmaceutical compositions for the treatment of skin disease. The composition comprises an antihistaminic-effective amount of

5 Epinastine or a pharmaceutically acceptable salt thereof as a pharmacologically active compound and at least one compound selected from the group consisting of one or more sulfur containing amino acid(s) or peptide(s) as biologically active donor of a –S- or -SH group, at least one vitamin of the B group, at least one vitamin having antioxidant properties and an antiphlogistic-effective amount of an antiphlogistic compound. The

10 compositions also may comprise pharmaceutically acceptable additives.
